

Part 2: Working with Figures

YouTube and Vimeo

Inserting a YouTube or Vimeo Movie

Use the Insert button on the toolbar and choose either a YouTube Video or Vimeo Video.

You will then be able to paste in the URL to the video. This should be the URL to the video, not the embed code.

Automatic WebView

Curio will then parse the URL to extract out the actual movie name then turn it into an embeddable URL. A WebView of the correct size is then created, the embed URL is set, and the resulting WebView is placed on your idea space ready for viewing
