

# Part 1: Introduction

## Navigator

In the upper-right corner of the window you'll find a navigator bar for moving around your project.

### **Splitter**

The splitter button is used to open up or close the secondary idea space split view. Option-click on this button to switch the secondary view between the side-by-side and above-below layouts.

### **Bookmarks**

The bookmarks popup button can be used to create bookmarks to easily jump to points within your project.

### **Navigator**

The navigator is a popup display showing the complete hierarchy of the current section or project so you can select and instantly jump to another Organizer item. In many cases you can leave the Organizer hidden and simply use the Navigator popup instead.

### **Previous/Next**

  The previous/next buttons are available to move to the previous or next item in the Organizer. If you hold Command down then the buttons change to indicate that clicking will move you to the first or last item in the Organizer. If you hold Option down then the buttons change to indicate clicking will move you backwards or forwards in history if you've been jumping around your project in non-sequential order. Note you can also swipe using your mouse to navigate through your idea spaces.
