

## **Read Me!**

Deframe is a movie management tool that helps you get greater value out of your video assets by letting you extract high-quality still images and clips from your movies. Those still images can be stored directly in a file or packaged in a PDF as a contact sheet. Newly created movie clips can be exported in a variety of sizes for a number of different devices.

### **System Requirements**

This software works best with OS X 10.8.5 or later.

### **Installation**

1. Double-click the archive file you have downloaded, Deframe151.zip. Open a Finder window for the Deframe151 folder, which will contain the application, along with several other documents.
2. Read the Deframe License Agreement and Deframe Quick Start Guide.
3. Drag the Deframe icons to the Applications folder on your disk drive. Double-Click the icon to launch the programs.

### **Purchase and Registration**

Until purchased and registered, the software will function as a time-limited demo. The expiration date can be found on the Registration Panel.

Once the software expires you will no longer have unlimited access to the software's full functional capabilities. To purchase a license, visit our website at <http://www.einsteinslegacy.com> and click the "Store" link in the top right corner.

### **Finding More Information**

While using this software, you may open the User Guide by choosing "Deframe Help" (Cmd-?) from the Help menu.
