

For The DBAs

ExisPto is a read-only application. No updates will be issues against your Peoplesoft Installation. What is needed for the ExisPto to function is a user id set up to read a few tables. The tables are listed below.

Please note that you do not need to give read access to the conversation tables IF your installation does not require them. Conversation table access is purely optional.

Likewise, if only customer contacts are going to be synchronized, you do no need to provide access to the vendor tables.

The user id you create will be used to set up the DSN on your client machine's machine (see DSN guide)

All table reads are done with (NOLOCK) option

1. Customer contact tables needed:

- a. PS_CONTACT_CUST
- b. PS_CONTACT
- c. PS_CUSTOMER
- d. PS_CUST_ADDRESS
- e. PS_CONTACT_PHN

2. Customer Conversation tables needed:

- a. PS_CUST_CONVER_HDR
- b. PS_CUST_CONVER

3. Vendor contact tables needed:

- a. PS_VENDOR_CNTCT
- b. PS_VENDOR
- c. PS_VENDOR_ADDR
- d. PS_VNDR_CNTCT_PHN

4. Vendor Conversation tables needed:

- a. PS_VENDOR_CONVER
