

MenuControl 4 Revision History

This document contains details regarding improvements of the MenuControl 4 FileMaker plug-in.

MenuControl version 4.0.2.36 for Windows and Mac OS X

- Fixed: In FileMaker 11, on Mac OS X, in case if document contains a scroll bar, Pop-Up and Context menus could get displays in a wrong position. This has been addressed.
- Fixed: Empty Context menu could prevent the plug-in from displaying Context menu for another event. This has been addressed.
- Fixed: In FileMaker 11, on Mac OS X, in case if database displays a custom dialog window, menu item click could make this menu item permanently inactive. This has been addressed.
- Fixed: In FileMaker 11, on Mac OS X, using 'Ctrl + Click' wouldn't show the custom context menu. This has been addressed.

MenuControl version 4.0.1.33 for Windows and Mac OS X

- Fixed: The plug-in could crash with non-English versions of FileMaker application. This has been addressed.
- Fixed: Context menu could be positioned in wrong way, depending of current FileMaker window parameters. This has been addressed.
- Fixed: On Mac OS X 'Preferences' menu item could disappear when switching to Preview mode. This has been addressed.
- Fixed: On Windows maximized database window could block custom dialog message script step. This has been addressed.

MenuControl version 4.0.0.30 for Windows and Mac OS X

- Improved: This version of MenuControl is FileMaker 11 compatible¹

¹*Important: FileMaker 11 will not load any Classic plug-ins on Mac OS X any longer, therefore only a Unicode plug-in version is FileMaker 11 compatible. This means that if you were previously using a Classic plug-in version, in order to use the Unicode plug-in version you will need to update your scripting. Please notice that only a plug-in function call style shell change, and all the menu codes shell remain.*
